Summary

Highly motivated software engineering candidate with a strong background in programming, cybersecurity, technical support, and system implementation. Experienced in troubleshooting, SAP-based system support, and training users in demanding operational environments. Quick learner with strong analytical, problem-solving, communication, and teamwork skills.

Technical Skills

Programming: C++, Python, Java, SQL, JavaScript, HTML and more

AI Tools: ChatGPT, Claude, prompt engineering and more

Cybersecurity: Kali Linux, Nmap, Metasploit, Wireshark

Tools and Environments: Git, GitHub, Jira, Linux, Virtual Machines, React, Android Studio, Firebase and more

Additional: SAP-based systems, technical support, Internet Hardware

Reserve Military Service

IDF Reserve Duty - פיקוד הנדסה טנ"א

2025–Present

- Completed more than one year of extended reserve service.
- Worked effectively in a demanding environment requiring responsibility, adaptability, discipline, and teamwork.

Current Professional Training

Cybersecurity Course

Ecom School

2026–Present

Currently completing practical training in cybersecurity and information security.

- Gaining hands-on experience in penetration testing, vulnerability assessment, cyber incident management, and security analysis.
- Developing practical knowledge of attack and defense techniques, network security, and cybersecurity tools.
- Working with tools and environments such as Kali Linux, Nmap, Metasploit, Wireshark, and virtual machines.

Professional Experience

SAP System Implementer

Ness Technologies | Soroka Medical Center, Beer Sheva

October 2024–2025

- Implement and support the SAP-based MANOR system in the emergency department.
- Train medical and administrative staff on effective system usage.
- Provide on-site technical and operational support.
- Troubleshoot system issues and help maintain uninterrupted workflows.
- Work closely with hospital teams in a fast-paced environment.

Technical Support Representative

Partner Communications

June 2023–October 2024

- Diagnosed and resolved internet, network, and equipment issues.
- Guided customers through technical troubleshooting processes.
- Worked simultaneously with multiple support and diagnostic systems.
- Explained technical solutions clearly to customers.
- Managed customer requests efficiently while working under pressure.

Production Machine Operator

HP Indigo | Kiryat Gat

March 2022–May 2023

- Set up and operated industrial production machinery.
- Monitored production cycles and controlled machine settings.
- Identified and reported technical and operational issues.
- Followed quality, safety, and production procedures.

Sales Representative

Ivory | Beer Sheva

August 2018–July 2019

- Identified customer needs and recommended suitable technology products.
- Explained technical specifications and product differences.
- Provided customer service and assisted throughout the sales process.

Education

B.Sc. Studies in Software Engineering

Sami Shamoon College of Engineering (SCE), Beer Sheva

2019–2024

Specialization: Cybersecurity

- Completed specialized courses in cybersecurity, computer networks, cryptography, software development, databases, and machine learning.

Final Project — AI-Based SMS Phishing Detection Application

- Developed an Android application that scans incoming SMS messages and identifies potential phishing attempts.
- Integrated an AI-based classification model trained to detect suspicious message content.
- Implemented a feedback mechanism that allows the model to learn from user feedback and improve its classifications.
- Combined Android development, cybersecurity, databases, and machine-learning concepts.
- Designed the application to help users identify phishing attempts and improve their awareness of mobile security threats.
